

THE PRODUCTION AND ADJUSTMENTS

We have been producing and adjusting the high performance sintermetallic and cerametallic clutch driven plates for many years in order to help to our customers to achieve extreme performance and to withstand high torques on their vehicles. Our product supply starts from the clutches for very light cars as for example for light single seat cars to very heavy trucks for rally raids. For tuned vehicles we adjust the clutch driven plates even with keeping the standard OE dimensions. Also, we are producing the sintered brake shoes for historical vehicles in order to withstand higher temperatures, while keeping the required friction properties. All those products are delivered under our registered trademark RENSPOORT.

Martin Krejsa, ŠKODA FABIA 1.9TDi RS, for uphill races

Clutch kit Lotus

Clutch plate adjustment Off-road Toyota Landcruiser 4,2 TD

BMW 1150 GS Adventure - RENSPOORT
